INVESTOR EVENTS 2026 · READOUT FOR THE HEAD OF IR

# Meetings rose after our events, but nearly as much at firms that were not there. We cannot yet show that events bring in new deals.

**$1.2M**
spent on 3 events, March to June

**78%**
of our 60 investor firms attended (47 firms)

**Attending firms we met with**
**43% → 60%**
60 days before → after the event. Similar firms not at the event: 26% → 41%

**55%**
of all committed capital is one $650M deal we have not verified

## Three decisions before the next event budget

**1 · Track which deals each event brings in, and verify the $650M deal**
Today we cannot link a meeting or a deal to the event behind it.

**2 · Meet every Tier 1 firm within 30 days of an event**
10 of 13 were not met within 60 days. 4 with open deals have had no logged meeting since.

**3 · Review Berlin; try two more dinners before moving budget**
Berlin cost the most ($610K) and we met fewer of its firms afterwards. London did best, but on a small sample.

Data as of 14 Oct 2026 · results over the 60 days after each event · attended = at least one person confirmed · details in the dashboard

# Firms that were not at our events saw almost the same rise in meetings; only London stood out. Events did not bring more new deals than usual.

## 1 · WHAT HAPPENED

### Only London lifted meetings more than at firms that were not there

London: meetings with the firms that attended, 60 days before → after

**+158%** (12 → 31)

Similar firms not at London, same weeks

**+33%** (6 → 8)

All three events together: meetings rose 54% with attending firms and 62% with similar firms that were not there. London's result rests on 9 firms: a signal, not proof.

Tier 1 firms we had still not met after an event they attended

| 11 of 13 | 10 of 13 | 4 of 13 |
|---|---|---|
| after 30 days | after 60 days | after 90 days |

## 2 · WHAT IT LED TO

### Attending firms opened no more new deals than firms that were not there, and those deals did not close more often

Firms opening a new deal, 60 days before → after

Firms that attended

**+6 points** (27% → 33%)

Similar firms not at the event, same weeks

**+12 points** (32% → 44%)

Share of deals that have committed, comparing deals 4 to 8 months old

Opened after an event

**13%** (2 of 16)

Already open before the firm's first event

**19%** (3 of 16)

Caveats: only 3 events · invited firms were chosen, not random · meetings are logged only for firms that attended · differences are within the margin of error

# Call the firms we missed now, and set up the next event so we can measure it.

THIS WEEK

## Tier 1 firms with an open deal and no meeting since their event: check the CRM, then call

| Firm | Investor | Attended | Stage | Deal size | Last met |
|---|---|---|---|---|---|
| Firm 45 | Insurance | NY | IC | $76.5M | Never |
| Firm 22 | Foundation | All three | Diligence | $50M | 9 Mar |
| Firm 44 | Insurance | NY, Berlin | IC | $40M | 17 May |
| Firm 26 | Foundation | Berlin | IC | $40M | 9 Jun |

Across all tiers, 14 firms have had no logged meeting since their event; 12 have open deals worth $707M. Some contact goes unlogged: 4 firms, Firm 45 among them, have deals that moved forward with no meeting recorded. Another 10 firms were met, but more than 60 days after their event.

BEFORE THE NEXT EVENT

## So next year we can tell if it worked

- **Record which event** each new deal came from
- **Log meetings for every firm,** not just attendees
- **Record actual attendance,** not RSVPs
- **Compare invited firms** with similar firms not invited
- **Try two more dinners;** review Berlin and its follow-up
- **Verify the $650M deal** before quoting totals

Order: deals closest to closing (IC or due diligence) first, then by size · as of 14 Oct 2026 · full list, all tiers, in the dashboard
