INVESTOR EVENTS 2026 · READOUT FOR THE HEAD OF INVESTOR RELATIONS

Meetings rose after our events, but nearly as much at firms that were not there. We cannot yet show that events bring in new deals.

$1.2M
spent on 3 events, March to June

78%
of our 60 investor firms attended (47 firms)

Attending firms we met with
43% → 60%
60 days before → after the event. Similar firms not at the event: 26% → 41%

55%
of all committed capital is one $650M deal we have not verified

Three decisions before the next event budget

1 · Keep event spending flat and run the next events as a test
None of four checks shows events changed deals. With three events that is unproven, not disproven.

2 · Confirm the $1.4B recorded at investment committee
Of 39 deals that reached it, 2 committed; records may be out of date. Verify the $650M deal too.

3 · Call the 12 firms with open deals we have not met since their event
$707M in open deals, 4 of them Tier 1 firms. Check the client database first.

Data as of 14 Oct 2026 · results over the 60 days after each event · attended = at least one person confirmed · details in the dashboard

Firms that were not at our events saw almost the same rise in meetings; only London stood out. Events did not bring more new deals than usual.

1 · WHAT HAPPENED

Only London lifted meetings more than at firms that were not there

London: meetings with the firms that attended, 60 days before → after

+158% (12 → 31)

Similar firms not at London, same weeks

+33% (6 → 8)

All three events together: meetings rose 54% with attending firms and 62% with similar firms that were not there. London’s result rests on 9 firms: a signal, not proof.

Tier 1 firms not yet met after an event they attended

11 of 13	10 of 13	4 of 13
after 30 days	after 60 days	after 90 days

2 · WHAT IT LED TO

Attending firms opened no more new deals than firms that were not there, and those deals did not close more often

Firms opening a new deal, 60 days before → after

Firms that attended

+6 points (27% → 33%)

Firms that went to a different event, same weeks

+12 points (32% → 44%)

Share of deals that have committed, comparing deals 4 to 8 months old

Opened after an event

13% (2 of 16)

Already open before the firm’s first event

19% (3 of 16)

Caveats: only 3 events · invited firms were chosen, not random · meetings are logged only for firms that attended · differences are within the margin of error

This week: confirm the deals recorded at investment committee and call the firms we missed. Before the next events: set them up as a test.

THIS WEEK

Confirm the $1.4B recorded at investment committee

Of 39 deals that reached the investor’s committee, 2 committed. Ask each deal owner for the real stage, close deals that are no longer live, and verify the $650M deal.

Then call firms with open deals, Tier 1 first

Firm	Investor	Deal stage	Deal size	Last met
Firm 45	Insurance	Investment committee	$76.5M	Never
Firm 22	Foundation	Due diligence	$50M	9 Mar
Firm 44	Insurance	Investment committee	$40M	17 May
Firm 26	Foundation	Investment committee	$40M	9 Jun

BEFORE THE NEXT EVENTS

Run them as a test, so next year we know

- **Record which event** each new deal came from
- **Log meetings** for every invited firm
- **Compare** with similar firms left out only because places ran out
- **Follow attending firms** for 6 to 12 months
- **Give family offices more places:** 6 of 14 of their older deals committed, against 6 of 57 for all others
- **Redesign or skip Berlin;** try two more dinners

Full call list in the dashboard: 12 firms with $707M in open deals · check the client database first, as some meetings are not logged · as of 14 Oct 2026
